

CAL LAB SOLUTIONS, LLC

Fusing Software with Metrology

PRESS RELEASE

Agilent Technologies and Cal Lab Solutions Sign a Channel Partner Agreement

DENVER, CO – September 30, 2008. Cal Lab Solutions (CLS), a software engineering and consulting company whose primary focus is on the metrology industry recently entered into a Channel Partnership and Value-Added Reseller Agreement with Agilent Technologies. Such a relationship with Agilent Technologies is an important step for CLS in its development of a turnkey automated test system. This Channel Partnership also allows CLS to improve upon and expand support to Agilent customers and self-maintainers with automated calibration procedures for instruments not supported by Agilent TME.

Under this agreement, CLS introduced the PCS-50, a complete turn-key solution for calibration of power sensors, power splitters, and attenuators. With the increased frequency range of 9 kHz to 50 GHz, the PCS-50 package was designed to be a replacement system for the aging HP 11760S power sensor calibration system. PCS-50 is just the first turn-key solution; Cal Lab Solutions will be creating other turnkey systems for other product lines.

As a result of this Channel Partnership, Agilent Technologies has also recognized Cal Lab Solutions as a prime source for automated calibration procedures for the Fluke MET/CAL[®] platform. Customers wanting automated solutions for instruments not supported by Agilent TME can now find a link to CLS on the Agilent web site at

About CLS

Based in the Denver Metro Area in Colorado, Cal Lab Solutions, LLC provides the metrology industry with innovative and progressive solutions in order to keep companies competitive. As the number of trained and experienced calibration technicians continues to shrink, the need for automation and training becomes critical. CLS partners and developers have formal training in both metrology and software development, giving them the expertise needed to provide the industry with effective solutions.
